W. CARY EDWARDS
Attorney General

COLONEL C. L. PAGANO
Superintendent

Dear Reader:

As in the past, the State of New Jersey will once again be ranked as one of the safest states in the nation. We believe the major factors attributed to this were the continuing alcohol awareness programs, the mobile D.W.I. patrols, the sobriety checkpoints, and the 55 M.P.H. speed enforcement programs.

The statistics for 1985 indicate a death rate of 1.82 for every 100 million miles traveled. During 1985, motorists in New Jersey traveled 53,107,180,000 miles, which was an increase of 937,685,000 miles from the previous year.

This report constitutes a detailed look at the causes and results of fatal accidents throughout the state during 1985. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1985.

Sincerely,

Clinton L. Pagano

M. ALCOHOL FACTOR

There were 964 fatalities during 1985. Of this total, 750 were tested for alcohol and 214 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples; and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims. Of the fatalities, 486 were drivers; 201 passengers; 257 pedestrians; 19 pedalcyclists; and 1 pedalcycle passenger. Of the 750 tested, 339 were positive for alcohol in varying degrees and 411 were negative. This would indicate 45.2% of the fatalities tested were positive for alcohol and 54.8% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**
   There was a total of 486 drivers killed, of which 408 were tested. Of those tested 191 were positive and 217 negative, for a 46.8% alcohol factor. The .10% and over alcohol level, has the largest number listed. Of the 191 imbibing drivers, 140 or 73.3% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 201 passengers killed, of which 133 were tested. Of those tested, 60 were positive and 73 were negative for a 45.1% positive alcohol factor.

3. **Pedestrians:**
   There was a total of 257 pedestrians killed, of which 199 were tested. Of those tested, 86 were positive and 113 negative for a 43.2% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 19 pedalcyclists and 1 pedalcycle passenger killed, of which 10 were tested for alcohol content. Of those tested, 2 were positive and 8 negative for a 20% alcohol factor.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 91.31% completed. Of the 418.65 miles of roadway which are projected for this system, 382.26 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Twenty-six percent of the forty-three (43) fatal accidents which occurred during 1985 involved pedestrians. Twenty-six percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.7 deaths per month, and one death for every 8.7 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

Moped Involvement

In 1985, there were two Moped Fatal Accidents, both victims were 16 year old male drivers.

MOTORCYCLE INVOLVEMENT

There were 95,500 motorcycles registered in New Jersey during 1985, compared with 94,680 in 1984.

NEW JERSEY STATE POLICE — AGE OF MAJORITY

The enactment of Senate Bill S-992, that became effective on January 1, 1973, added over one-half million potential drinking drivers to our highways. Accident statistics are available for this age group (18 - 19 - 20); however, alcohol involvement relative to accidents is available only in accidents where fatalities occur.

Listed below are statistics indicating the involvement of **drivers** in accidents in the **18 to 20 year-old age group**. The year 1972 is used as a base, being the year prior to the Age of Majority.

Years	Total Fatal Accidents 18 - 20 Drivers	Total Drivers Involved	Number of Drivers Drunk	Percent of 18 - 20 Drivers Drunk

COLONEL C. L. PAGANO

Dear Reader:

As in the past, the State of New Jersey will once again be ranked as one of the safest states in the nation. We believe the major factors attributed to this were the continuing alcohol awareness programs, the mobile D.W.I. patrols, the sobriety checkpoints, and the 55 M.P.H. speed enforcement programs.

The statistics for 1986 indicate a death rate of 1.92 for every 100 million miles traveled. During 1986, motorists in New Jersey traveled approximately 54 billion miles, which was an increase of almost 1 billion miles from the previous year.

This report constitutes a detailed look at the causes and results of fatal accidents throughout the state during 1986. Hopefully, the continued efforts and cooperation of the public, federal, state, and local agencies will help us maintain our traffic safety record in the years ahead.

It is important that the law enforcement community be firmly committed to the 55 M.P.H. speed enforcement programs. We are convinced that this will save lives.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1986.

Sincerely,

Clinton L. Pagano

M. ALCOHOL FACTOR

There were 1039 fatalities during 1986. Of this total, 832 were tested for alcohol and 207 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples; and the failure on the part of some investigative agencies and medical examiners to have tests performed on the victims. Of the fatalities, 514 were drivers; 212 passengers; 278 pedestrians; and 35 were pedalcyclists. Of the 832 tested, 341 were positive for alcohol in varying degrees and 491 were negative. Eight tested positive for drugs. This would indicate 41% of the fatalities tested were positive for alcohol and 59% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. **Drivers:**

   Killed:

   There was a total of 514 drivers killed, of which 453 were tested. Of those tested, 205 were positive and 248 negative, for a 45.2% alcohol factor. The .10% and over alcohol level has the largest number listed. Of the 205 imbibing drivers, 136 or 66.3% had an alcohol level of .10% or higher.

   Surviving:

   There was a total of 831 surviving drivers of which 217 were tested. Of those tested: 100 were positive for alcohol in varying degrees and 115 were negative, for a 46% positive alcohol factor. Of the 100 imbibing drivers, 56% had an alcohol level of .10% or higher.

2. **Passengers:**
   There was a total of 212 passengers killed of which 136 were tested. Of those tested, 54 were positive and 82 were negative for a 39.7% positive alcohol factor.

3. **Pedestrians:**
   There was a total of 278 pedestrians killed of which 222 were tested. Of those tested, 81 were positive and 141 negative for a 36.4% alcohol factor.

4. **Pedalcyclists:**
   There was a total of 35 pedalcyclists and 1 pedalcycle passenger killed of which 21 were tested for alcohol content. Of those tested, 1 was positive and 20 negative for a 4.8% alcohol factor.

Negative: Tested and found to be negative.

No Test: Because of delayed death, age factor, contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause test to be performed on victims.

Note: ‡ Two driver victims were under the influence of drugs.

§ One driver victim and one pedestrian victim were under the influence of drugs.

* Six driver victims and two pedestrian victims tested positive for drugs.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 92.9% completed. Of the 418.65 miles of roadway which are projected for this system, 389.47 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Thirty-one percent of the thirty-nine (39) fatal accidents which occurred during 1986 involved pedestrians. Eighteen percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.4 deaths per month, and one death for every 9.5 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

NEW JERSEY STATE POLICE — AGE OF MAJORITY

The enactment of Senate Bill S-992, that became effective on January 1, 1973, added over one-half million potential drinking drivers to our highways. Accident statistics are available for this age group (18 - 19 - 20); however, alcohol involvement relative to accidents is available only in accidents where fatalities occur.

Listed below are statistics indicating the involvement of **drivers** in accidents in the **18 to 20 year-old age group**. The year 1972 is used as a base, being the year prior to the Age of Majority.

Years	Total Fatal Accidents 18 - 20 Drivers	Total Drivers Involved	Number of Drivers Drunk	Percent of 18 - 20 Drivers Drunk

On January 2, 1980, Senate Bill S-1126 was signed into law as Chapter 260, Laws of 1979, which extends to persons 19 years of age and older the right to sell, purchase and consume alcoholic beverages. The figures below reflect those drivers in the 19 - 20 year-old age group.
